MANUFACTURER DATA

Manufacturer name: Apco Aviation Ltd

Contact person: Jonathan Cohn

Street: 7, Chalamish St. Industrial park

Post code / place: 3088900 Caesarea

Country: Israel

SAMPLE DATA

Name: Swift

Size: M

Impact pad type: Foam

Pilot max load [kg]: 120

Harness type: ABS

Serial number: 11701

Weight [kg] : 6.4

Sample reception date: 29.03.2017

Test date: 29.03.2017

ISSUE DATA

Place of declaration: Villeneuve

Date of issue: 06.06.2017

Director Management: Alain Zoller

Signature:

This signature aprouve the validity of the test reports PH BP

Air Turquoise SA, having thoroughly assessed the sample mentioned hereunder, declare it was found conform with all requirements defined by the following norms:

Airworthiness requirements for hang gliders and paragliders LTF 2009 as published in NfL 91/09 chapter 5 Paraglider harness protectors

Present declaration's scope only extends to the conformity of a given sample, on a given date and in a given place – as mentioned here above

This inspection report contain the following test and is complet with the test report PH BP

### TESTS RESULTS SUMMARY

Shock impact tests is executed on these harnesses in order to prove the damping characteristics of it.

|         |          |          |                         |                                                                                                         | Impa          | ct at 165 cm (Se                         | eat plate)                                |          |

# C. RESCUE DEPLOYMENT STRAP STRENGHT TEST SUMMARY

.The connection between handgrip and inner container has to have sufficient load capacity/structural strength in any situation that may arise during normal use .During this test is verified, whether this connection fulfill the requirements

Calculed value in tests reports include the value minus the uncertainty (on safe side) / The uncertainty stated is the expanded uncertainty obtained by multiplying the standard uncertainty by the coverage factor k = 2. The value of the measurand lies within the assigned range of values with a probability of 95%.

This declaration must not be reproduced in part without the written permission of AIR TURQUOISE SA.

#### PH PARAGLIDER HARNESSES

Inspection certificate number: PH\_195.2017

Manufacturer name: Apco Aviation Ltd

Name: Swift

Max load [kg]: 120

Serial number: 11701

Date of test: 23.03.2017

Test responsible: Alain Zoller

**Directives: EN 1651:1999** 

Test standard §: 5.3.2.1

Test setup: Default flying position

Attachment points: Both main riser attachments (3, 4)

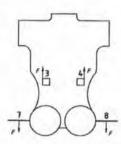

Dummy: Default, hip fixed (7, 8)

Required load in force [g]: 6

Model max load [kg]: 120

Required test load in [N]: 7063

Min. duration test load [s]: 10

#### Results

Duration of maintained min. load [s]: 18.47

Any signs of structural failure after this test: no failure

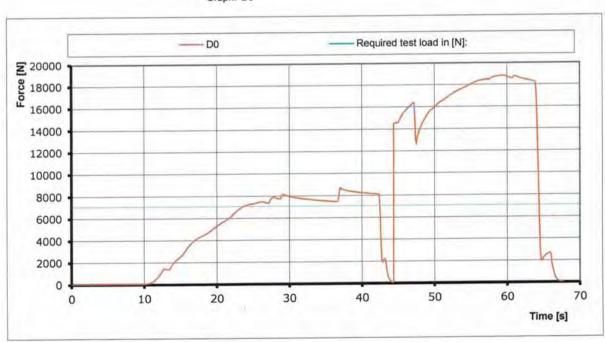

Test result: POSITIVE

#### PH PARAGLIDER HARNESSES

Inspection certificate number: PH\_195.2017

Manufacturer name: Apco Aviation Ltd

Name: Swift

Max load [kg]: 120 Serial number: 11701

Date of test : 23.03.2017

Test responsible: Alain Zoller

Directives: Nfl II 91 / 09

Test standard §: 6.1.5

The deployment of the rescue system has to be ensured in all circumstances, especially with a damaged glider.

The pilot has to be able to deploy the rescue chute with a single pull out of the outer container, single handed and in an anatomical favorable direction.

In order to simulate this, the test responsible deploys the rescue seated in the harness. In a similar way as in real flight. The deployment resistance is approximately measured by the load cell, which is placed between the hand of the test responsible and the rescue hand grip.

On the other hand inadvertent deployment has to be fairly remote. Therefore a shear link has to withstand a minimum load.

Requirements [kN]: 0.07

Min force to prevent unwanted opening [kN]: 0.02

#### Measured peak to peak required force for deployment [kN]:

Date of test: 23.03.2017 Test responsible: Alain Zoller

Directives: EN 12491:2001 & Nfl II 91 / 09

6.1.8 (LTF) Test standard §: 5.3.2 (EN)

Test setup: The handgrip of the outer container has to be connected to the inner container with a removable loop in a way that it is possible to use the inner container

with different types of outer containers.

The connection between handgrip and inner container has to have sufficient load capacity/structural strength in any situation that may arise during normal

operation.

In order to verify this, the connection is tested on its tensile strength by a

default tensile testing setup.

In addition to this the breaking resistance will also be measured.

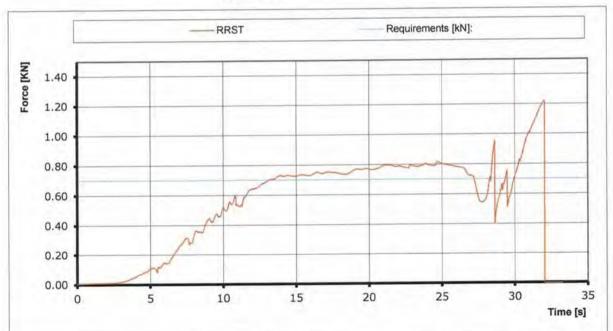

Requirements[kN]: 0.7 Requirements[s]: 10

#### Results

Duration of maintained load [s]: 13.46 [C°] 24.3 Calculed max value of breaking resistance [KN]: 1.20 RH [%] 40
